

Durva Amin

B.Tech IT Student | Aspiring Information Security & GRC Professional

Mumbai, Maharashtra | +91-9699214949 | durvaamin.work@gmail.com

LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

B.Tech Information Technology student focused on Information Security, Governance, Risk, and Compliance (GRC). Building practical knowledge in cybersecurity fundamentals, security controls, access management, risk management, security documentation, and ISO/IEC 27001 concepts. Experienced in creating structured information security policies, system security documentation, network documentation, and security evidence. Seeking an Information Security, GRC, IT Risk, or Security Compliance internship to apply and strengthen cybersecurity knowledge in a professional environment.

EDUCATION

• K.J. Somaiya Institute of Technology	2023 – Present
B.Tech. Information Technology	CGPA: 8.14
• Maharashtra State Board	2023
Higher Secondary Certificate	75.33%
• Maharashtra State Board	2021
Secondary School Certificate	81.40%

CYBERSECURITY & GRC SKILLS

- **GRC:** Governance, Risk Management, Compliance, Security Policies, Security Procedures, Security Controls, Compliance Documentation, Risk Assessment
- **Information Security:** CIA Triad, Threats, Vulnerabilities, Risk, Exploits, Malware, Phishing, Authentication, Authorization, Access Control, Least Privilege, Data Classification
- **Security Controls:** Administrative, Technical, Physical, Preventive, Detective, Corrective, Compensating Controls, Defense in Depth, Segregation of Duties, Need to Know
- **Standards & Frameworks:** ISO/IEC 27001 Fundamentals, ISMS Fundamentals, Information Security Policies, Security Documentation
- **Networking:** OSI Model, TCP/IP, IP Addressing, MAC Address, DNS, HTTP/HTTPS, VPN, Firewall, Router, Switch, Ports, SSH, FTP, SMTP
- **Systems & Tools:** Windows Security, Windows Firewall, Windows Defender, Event Viewer, Linux/Ubuntu, Linux Permissions, GitHub, Microsoft Word, VS Code

GRC & INFORMATION SECURITY PROJECTS

- **Password & Access Control Policy** 2026
GRC / Information Security Documentation
 - Created a structured security policy covering password requirements, account access, authentication, authorization, user responsibilities, and access management.
 - Applied security principles including least privilege, strong authentication, secure password practices, and access control.
- **Windows Security Configuration & Evidence Documentation** 2026
System Security / Security Documentation
 - Documented Windows security configurations and security-related settings using structured evidence and screenshots.
 - Reviewed security controls including Windows Defender, Windows Firewall, user accounts, system settings, and security-related configurations.
- **Network Basics & Security Documentation** 2026
Networking / Information Security Documentation
 - Created structured documentation covering networking fundamentals including OSI, TCP/IP, IP addressing, DNS, HTTP/HTTPS, VPN, firewalls, routers, switches, and ports.
 - Connected networking concepts with basic security considerations and common network security controls.
- **Basic Office Network Documentation** 2026
Network Documentation / Security
 - Documented a basic office network structure including network components, connectivity, and communication flow.
 - Included basic security considerations for protecting office network infrastructure and connected systems.
- **Linux Commands & System Administration Handbook** 2026
Linux / System Administration Documentation
 - Created a structured handbook covering Linux commands, file systems, users and groups, permissions, processes, services, logs, and system administration fundamentals.
 - Documented security-relevant concepts including sudo, chmod, chown, user permissions, processes, and Linux logs.
- **Information Security Terms Glossary** 2026
Cybersecurity Fundamentals Documentation
 - Created a structured cybersecurity glossary covering threats, vulnerabilities, risks, exploits, malware, phishing, ransomware, authentication, authorization, and the CIA Triad.
 - Included concise definitions and practical examples to demonstrate understanding of fundamental information security concepts.

CYBERSECURITY TRAINING

- **Information Security & GRC Learning Program** 2026 – Present
Self-Directed Learning
 - Studying cybersecurity fundamentals, networking, operating systems, information security controls, GRC concepts, security documentation, and ISO/IEC 27001 fundamentals.
 - Practicing creation of professional security policies, procedures, control documentation, and risk-related documentation.

CERTIFICATIONS

- **TCS iON** – Career Edge: Young Professional
- **HarvardX** – CS50P: Introduction to Programming with Python
- **IIT Bombay** – Python Training

ADDITIONAL SKILLS

- Security Documentation | Technical Writing | Analytical Thinking
- Attention to Detail | Problem Solving | Willingness to Learn
